

OnGuard® 7.1

Integrated security software enhancements

Overview

OnGuard® version 7.1 supports a variety of video and access control hardware devices, improves the OnGuard enterprise architecture, and delivers additional functionality and reliability built on Lenel's ever-evolving tiered technology platform.

The latest OnGuard system release includes support for the LNL-1300e, a compact and flexible PoE door controller that can also be used as a network-wired Input/Output controller. The system also supports Interlogix® TruVision® recorders, a TruVision USB Joystick, and the OnGuard WATCH dashboard—an optional module that allows web browser monitoring of critical system and server parameters.

OnGuard 7.1 paves the way for future enhancements by continuing to evolve not only its feature set, but also its architecture.

Features & Functionality

Access Control

- LNL-1300e Network-Connected Flexible Door I/O Module controller support
- Support for the optional OnGuard WATCH (Web Access Trending & Comprehensive Health) web-based dashboard application
- Shorter selection lists and more intuitive configuration
- Ability to schedule reports to be generated in any supported report output format

Video

- Support for additional Interlogix TruVision recorders
- Support for Interlogix TruVision joystick (TVK-400USB)
- Enhanced joystick configuration options
- Simplified camera multi-stream configuration
- Simplified camera selection options

Enterprise Architecture

- Events, user transactions, and alarm acknowledgements now automatically replicated, without the need for scheduling
- All data necessary for archiving is now replicated to the master, allowing a single point of archiving in the enterprise
- Enterprise replication performance and security improvements
