

Active Directory for OnGuard

Integration links Active Directory accounts to OnGuard cardholders for increased IT policy compliance

- Security managers can easily configure mappings between OnGuard fields and Active Directory objects
- Provided tool links Active Directory users to OnGuard cardholders by selecting a common unique value using Lenel's Initial Active Directory Import Utility
- Field mapping configurations streamlined – via Active Directory sync tool
- No development required every time a configuration change is needed to accommodate new fields or business logic
- Option for new users to be automatically entered as cardholders to OnGuard database as they are added to Active Directory, and assigned access levels based on Active Directory group membership
- Optional automatic OnGuard cardholder and badge creation/modification (with revised values) whenever a user is updated in Active Directory
- Option allows active badges for a cardholder to be deactivated – and set to predefined user-configured status – when user is disabled/deleted in Active Directory

Customer needs

- Extend security and compliance of Active Directory data for cross-platform access control
- Achieve centralized authentication and a single sign-on for Active Directory
- Enable real-time synchronizations to add/update cardholders when Active Directory changes occur

BENEFITS

- Real-time integration and synchronization
- Support for all versions of OnGuard and compatible with every OnGuard version of Windows
- Seamlessly populate OnGuard cardholder and badge information
- Optional access level management to assign/remove access level groups based on LDAP group membership; and assign/remove access levels through LDAP multi-value attribute contents
- Reduces redundant data entry

End Users

- Companies with existing Active Directory enterprise solutions
- All OnGuard customers, including those in IT operations, facilities, safety, HR, finance, accounting and purchasing

Pain points addressed

- Increased IT policy adherence – minimizing potential security concerns through complete Active Directory integration and updating for all OnGuard cardholders
- Minimize typical data sync issues – through supplied tool and streamlined linking via import utility
- Interoperability between Active Directory and OnGuard databases – via automatic cardholder and badge adds and modifications
