

# Watchlist Integration for OnGuard

Immediate notification of visitors and cardholders who match customer-specific, federal state, and/or organization watchlists

- Enables real-time custom-configured searches against established watchlists
- Flexibility to monitor whitelists (VIPs and others) and blacklists, so different actions can be taken as needed and appropriate
- User-defined and pre-configured search patterns based on customer requirements, federal and/or state mandates
- Full system search available automatically as cardholders are created, modified, or when badges are presented at any designated reader(s)
- Automatic alerts when cardholder matches any pre-configured watchlist pattern – alarms sent to alarm monitoring; notifications to established e-mail recipients

## Customer needs

- Ability to quickly inform appropriate security personnel and key stakeholders of flagged individuals within the access control system
- Capability to subject individuals to enhanced scrutiny
- Compliance with state, federal and industry regulations
- Capacity for flexible, active monitoring of blacklists and whitelists

## End Users

- Government installations, high-profile commercial organizations, aviation interests and others

## WATCHLIST ADMINISTRATION

Configuration application provides configurable data sources for multiple Watchlist set-ups – data can be searched in real-time or downloaded on scheduled basis

## BENEFITS

- Completely configurable data importing and search patterns
- Reduces potential errors from manual searches
- Real-time alerts via OnGuard Alarm Monitoring and e-mail notifications
- Increased adherence to federal, state and industry regulations
- Configurable SSL encryption support
- Multiple list support
- Automatic search when cardholders are added, badges created/modified, and badges presented at any designated reader(s)

- Education and childcare facilities
- All organizations and facilities that need to provide enhanced scrutiny of visitors and staff, and those at greater risk of attempted, unauthorized entry

### Pain points addressed

- Risk reduction and management – more tools to protect against flagged individuals, enhanced notification capabilities for security personnel and key stakeholders
- More efficient monitoring and compliance – streamlined ability to detect potential breaches
- Responsive reporting – information on a watchlist match and an incident-response more readily available and communicated
