Modules for the OnGuard® platform

Evolving solutions for your expanding business needs.

OnGuard modules keep the business world moving.

OnGuard modules integrate seamlessly with the OnGuard platform, enhancing functionality, simplifying operations and improving security. Innovative and adaptable, modules can be added to the OnGuard system at any time, creating a scalable and customized solution that responds to current and future business needs.
Enhance your OnGuard® experience.

Adding OnGuard modules to your OnGuard system turns an excellent security management solution into an exceptional one. OnGuard modules not only increase system functionality, they also improve your overall user experience.

Integrating seamlessly with the OnGuard platform, modules can be easily launched, viewed and managed using the convenient Lenel® Console—a unified launch pad that ties core, browser-based and third-party components of the system into one.

Modules that enhance your OnGuard System.

Visitor Self-Service Module
An intuitive mobile application, this module automates guest procedures and streamlines the visitor management process. Pre-registration saves time and provides security personnel with key information about visitors to the property ahead of time.

Cardholder Self-Service Module
Designed with an easy-to-use, web-based interface, this module empowers cardholders to self-manage access requests and allows access managers to conveniently approve, deny or hold requests—all while providing an audit trail for access-request decisions.

Policies Module
Ideal for applications where access control is mission critical, this module ensures the OnGuard system configurations are correctly enforcing access rights and security policies. The module helps save money by improving operational efficiency, while helping reduce risk exposure.

Credentials Module
This module offers a browser-based alternative to the traditional OnGuard ID Credential Center Windows® application. Cardholders can securely access credentialing through a web browser on their desktop, laptop or tablet, no matter what operating system or mobile platform is used.

OnGuard® WATCH and WATCH lite
OnGuard WATCH (Web Access Trending and Comprehensive Health) and WATCH lite modules are web-based, forensic analysis tools that collect system data and display it on customizable, user-friendly dashboards. Users get a detailed overview of the system, allowing them to easily view important system information.

Compatibility
Although OnGuard Modules are designed to work seamlessly with the OnGuard platform, not all modules work with all versions of OnGuard. To learn more, please contact your Lenel representative for exact details on compatibility.
