

Area Access Manager

Business Productivity Tool

OnGuard Area Access Manager is a business productivity solution that enables authorized managers to control cardholder access to specific physical areas. A manager need only log in to the Area Access Manager application using a standard desktop PC or browser. OnGuard Area Access Manager displays a list of areas over which the manager has control, as well as a list of all personnel who have access to those areas. The manager can then assign or remove the access rights of employees to areas within his or her operational domain.

Immediate Return on Investment

OnGuard Area Access Manager provides a simple yet robust method for remotely administering access by individuals to specific areas in a facility. Using OnGuard Area Access Manager, corporate security departments can give managers independent control over the physical areas and staff for which they are responsible. This capability eliminates the ongoing need for intervention by a security administrator in order to assign or remove access privileges for each employee, thereby saving both time and money.

Audit Trail and Reporting Capabilities

OnGuard Area Access Manager's seamless integration with other OnGuard applications provides a complete audit trail and reporting capabilities. All access privilege assignments and removals are logged to the database with a time and date stamp and the identity of the manager who completed the transaction.

Intuitive, Wizard-like Interface

OnGuard Area Access Manager uses an intuitive wizard-like interface to provide fast, efficient management of specific physical areas. The application simplifies process of adding or removing cardholder access privileges, thereby streamlining training and minimizing the learning curve.

Standard Features

- Easy Deployment and Installation
- Wizard-Like Interface
- Audit Trail
- Complete Reporting Capabilities
- Video

Benefits

- Simple Management of Access level permissions
- Powerful Business Productivity Tool
- Decentralization of Access Privilege Management
- Reduced Training Costs
- Less Time Invested in Modifying Access Levels

Support

- Desktop or Browser-Based Client
- Available for ES, ADV, PRO and Enterprise Configurations

Area Access Manager

Browser or Client-based User Interface

Area Access Manager offers two different deployment models, desktop and browser-based client. Both modules are designed to allow users the ability to easily access cardholder information and assign/modify/revoke access permissions to the designated areas. Customers deciding to migrate from the desktop model to the browser-based client model will find an identical wizard process, eliminating the need for re-training. The browser-based client deployment also offers a no-cost OnGuard VideoViewer

component that is built into the user interface, allowing department managers to view video related to their specific areas.

Required Applications

- OnGuard Access

Desktop-Based Client

Step 1: Search

Access Level Assignment Wizard - Step 1 of 4 - Find People

Enter search criteria to find the people you want to assign access levels. Only people with active badges can be assigned access levels. To find people with an existing access level assignment, select one or more access levels.

Person type: **Cardholders** Person search type: **Do not include badge activation dates when searching for people**

Search for people with current badge activation dates
